

PVC rigid 'Westgran-Biovin'

Ecologically ahead: Reduce your carbon footprint by up to **70 %**!

Sustainability without compromise – full performance, less CO₂.

- Consistently high product quality
- Identical processing properties
- Full range available: all types and colours
- 100 % identical technical and mechanical properties
- UV stability remains unchanged

This is how your carbon footprint can be effectively reduced.

Made in Germany,
made for you!

At least
40 % of our
PVC compounds
are produced using
green electricity.

- **Traditional and independent:** Independently owned and family-run since 1974, now in its second generation.
- **Specialist in rigid PVC compounds:** Development and production of customised solutions to individual customer requirements.
- **Flexible and reliable:** High speed and adaptability in production and delivery.
- **Sustainable and responsible:** Committed to the environment, society, and long-term corporate goals.

Fully focused on
optimal solutions.

The demands on PVC end products are increasing – in terms of quality, precision, and on-time delivery. West-Chemie offers expertise for high-end PVC applications and is an experienced manufacturer of rigid PVC compounds for a wide range of extrusion and injection moulding uses.
